

Value Analysis of Multi Staged Language

Wontae Choi
ROPAS, SNU

at  2nd workshop
Research On Software Analysis for Error-free Computing
소프트웨어 무결점 연구센터 KOSEF ERC

Motivation

let's go further

we did abstract parsing for the 2-staged language

let's extend it to the n-staged language

Multi Staged Language

multi stage features

code is a value

code can be interpreted as a program

code can be modified

Multi Staged Language

languages with multi stage features

Ruby
A Programmer's Best Friend

python™

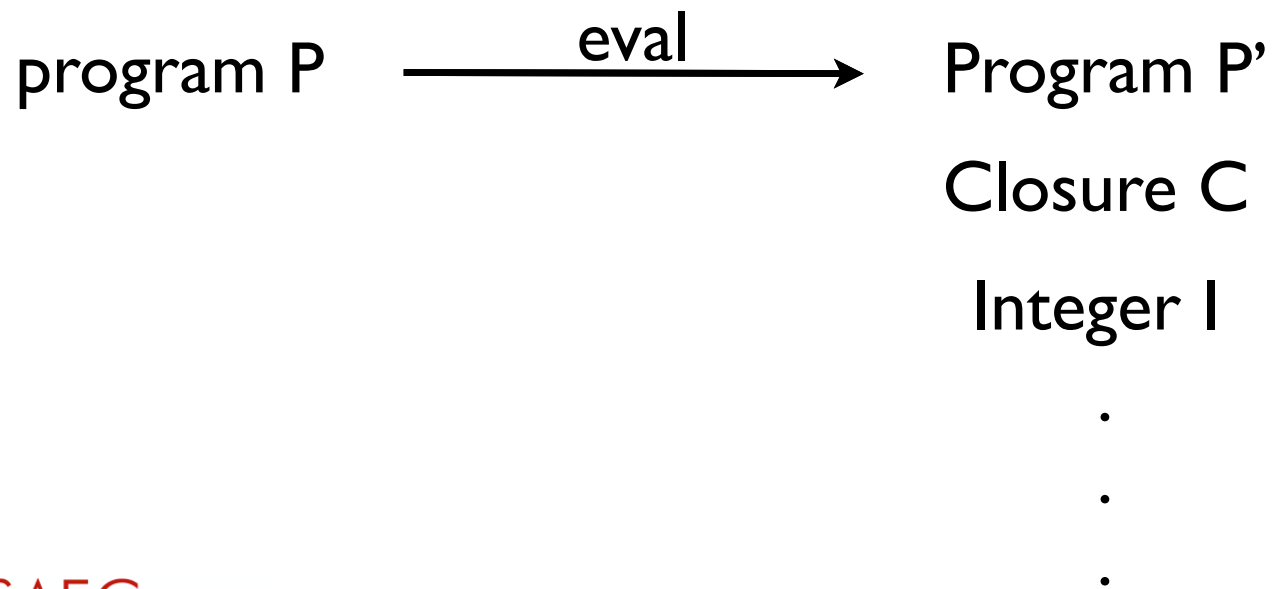

php

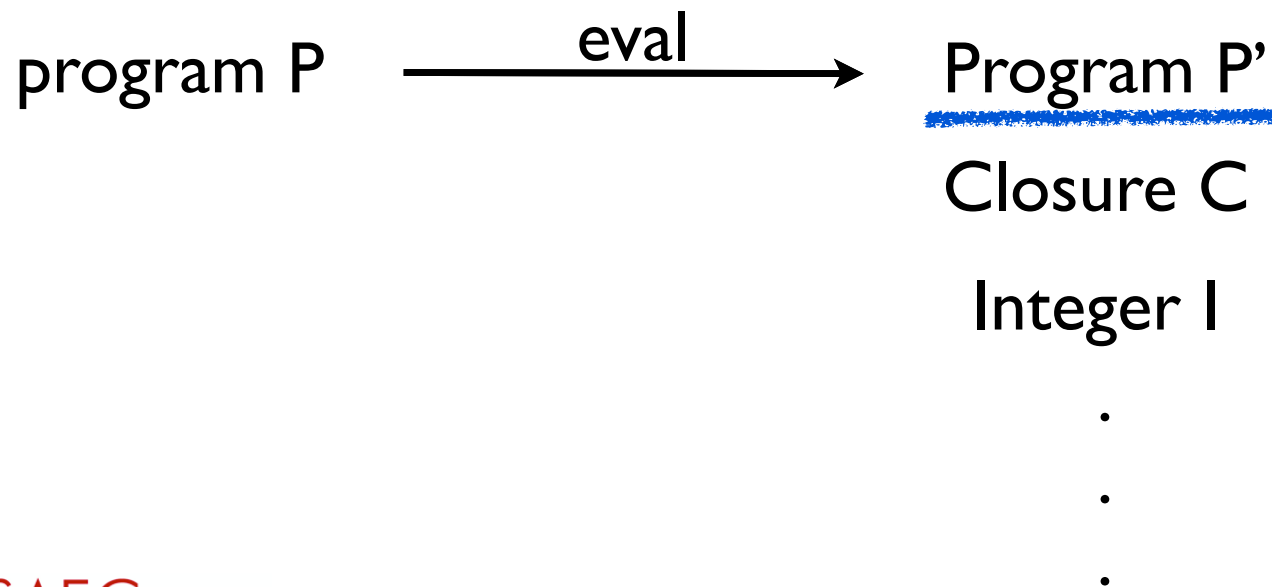

Multi Staged Language

evaluation

Multi Staged Language

I'm interested in the well-formedness of the resulting code

Value Analysis

what I want

Value Analysis

But, when I tried to design a analysis, I met....

$$[\text{eval } e] = \bigcup_{e' \in \gamma([e])} [e']$$

Value Analysis

But, when I tried to design analysis, I met....

$$[\text{eval } e] = \bigcup_{e' \in \gamma([e])} [e']$$

result could be infinite set

Value Analysis

But, when I tried to design analysis, I met....

$$[\text{eval } e] = \bigcup_{e' \in \gamma([e])} [e']$$

*result could be infinite set
analysis may not finish*

Value Analysis

But, when I tried to design analysis, I met....

$$[\text{eval } e] = \bigcup_{e' \in \gamma([e])} [e']$$

result could be infinite set

analysis may not finish

i need to find indirect analysis method

Indirect Analysis

how ????

program P

Set of Program
(Abstracted)

spent five months...

Transformation

one day, i met a paper

[Aktemur] : Type Checking Program Generators
Using the Record Calculus
, Baris Aktemur

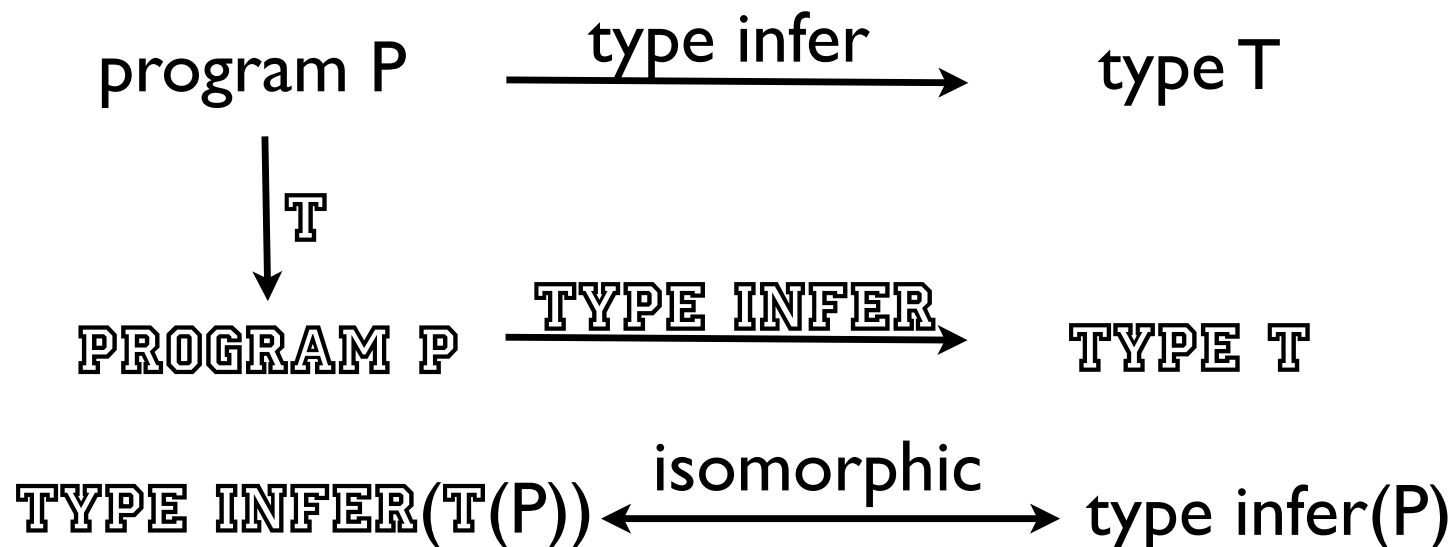

Transformation

[Aktemur] suggests a language \mathbb{L} and a transformation \mathbb{T} s.t.

language \mathbb{L} = lambda calculus + record

Transformation

[Aktemur] suggests a language \mathbb{L} and a transformation \mathbb{T} s.t.

Transformation

[Aktemur] suggests a language \mathbb{L} and a transformation \mathbb{T} s.t.

$$\mathbb{T}(\text{eval}(P)) == \text{EVAL}(\mathbb{T}(P))$$

Transformation

[Aktemur] suggests a language \mathbb{L} and a transformation \mathbb{T} s.t.

analysis algorithm is known

analysis algorithm is known *important!!*

Using Transformation

previously

Using Transformation

what I have

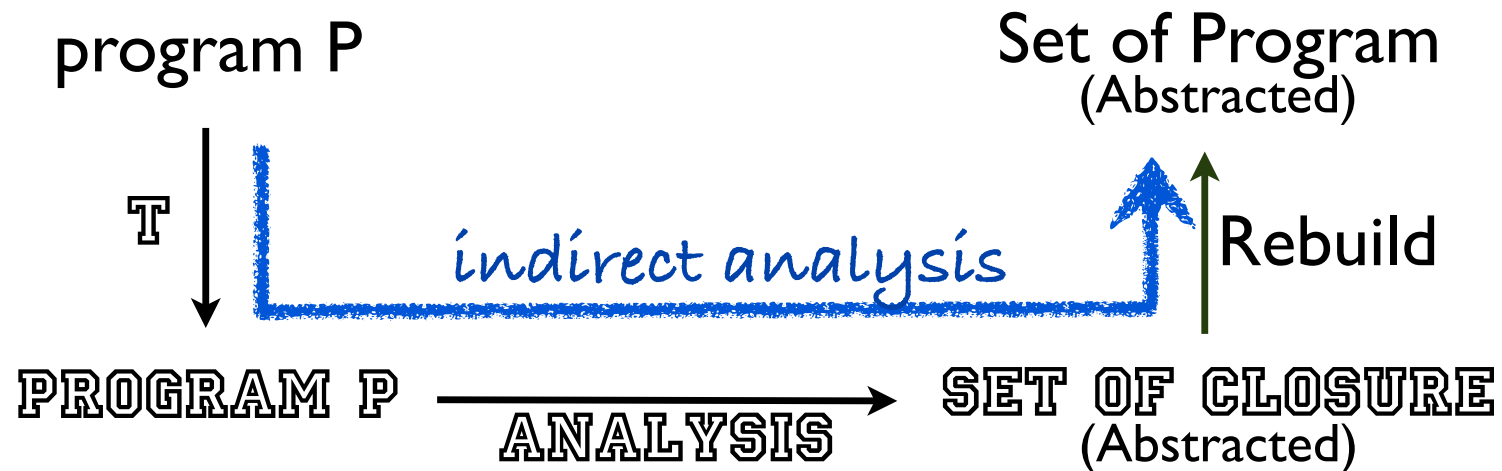

Using Transformation

if I have

Using Transformation

then I get

Trial

rebuilding the grammar from the CFA result

Obstacles

how to explain “Rebuild” intuitively?

Obstacles

how to show the soundness?

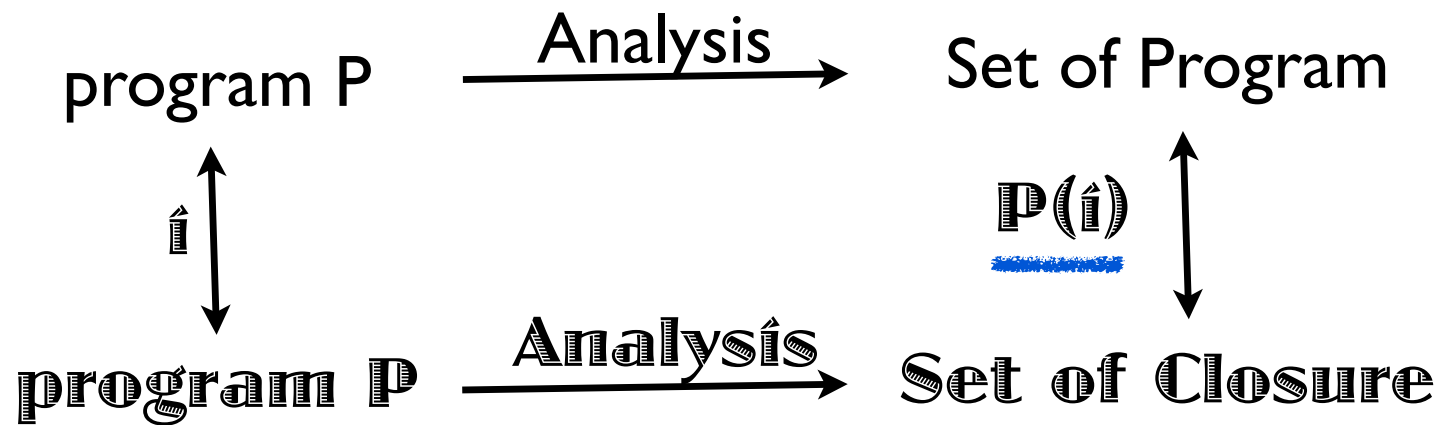

Plan

define isomorphic language \mathbb{L}

Plan

“Rebuild” may be explained and proved using \hat{i}

Question?
